

ADAPTATIONS SCAVENGER HUNT

There are so many awesome plants to see here at the Garfield Park Conservatory! Over time, every plant has developed its parts to help it survive — this process is called adapting because it helps the plant adapt, or fit in, to its environment.

Can you find...

Firecracker Plant!

When it rains, the seeds explode out of the plant with a big "POP," just like a firecracker!

Saguaro!

There is water inside the arms!

Giant Sea Grape!

The big leaves help the plant get enough sunlight!

Taro!

The leaves have special tiny hairs that act like an umbrella to keep the water out!

Ficus!

These roots help the ficus stand straight and strong!

Swiss Cheese Plant!

The holes keep heavy rains from breaking the leaves!
